

Water and Plumbing

Tap water in Florence can be drunk, it is biologically pure even if the taste is not as good as you may like.

There are certain times during the day when the water pressure may be low. Hot water in your apartment is either produced by a gas water heater which is usually the same unit as the apartment heating system, or by an electric boiler. In the case of electric boilers the quantity of hot water may be limited and you may have to wait for the unit to reheat.

Be very careful with the sewage system. Blockage of outlet drains and toilets can cause considerable inconvenience and expense. Do not throw sanitary napkins, tampons, etc. down toilets. Sinks do not have garbage disposals; keep drain outlets free of hair, food particles, razor blades, excess of soap, etc. Remember that you will be responsible for any damage incurred.

If you do happen to have a clogged drain never attempt to dismantle it in order to clean it, but ask for assistance.

WARNINGS

- If the rent you are paying includes utility (water) charges please note that only moderate consumption is considered, you will be charged for any excessive use.
- Make sure that all faucets are turned off tightly at all times especially if leaving the apartment for a long period.
- If for any reason in the bathroom shower or the kitchen sink water overflows on to the floor make sure to dry carefully to avoid water dripping to the floor below and causing damages that would require extensive repairs.
